Thanks for pointing me in the right direction Gabriella!

I found this information. I hope it answers your question.

Elizabeth

EMOTIONALITY/ACTIVITY/SOCIABILITY/IMPULSIVITY TEMPERAMENT SURVEY (EASI), given at Endpoint

This instrument, filled out by the parent/parent figure, is an evaluation of the child, and consists of 50 items (EAEPIT1-EAEPIT50), which may assume values of 1 (completely disagree), 2 (mildly disagree), 3 (neutral), 4 (mildly agree), or 5 (completely agree). From these are derived 10 factor scores.

Emotionality - general      EAEPF1      sum of items 1,11(R),21,31,41

Emotionality - fear              EAEPF2      sum of items 2,12,22,32(R),42

Emotionality - anger      EAEPF3      sum of items 3,13(R),23,33,43

Activity - tempo              EAEPF4      sum of items 4,14(R),24,34,44

Activity - vigor              EAEPF5      sum of items 5,15(R),25,35,45

Sociability              EAEPF6      sum of items 6,16(R),26,36(R),46

Impulsivity - control      EAEPF7      sum of items 7,17,27(R),47(R)[1]

Impulsivity - decisive      EAEPF8      sum of items 8,18(R),28(R),38,48(R)

Impulsivity - sensation      EAEPF9      sum of items 9,19,29,39(R),49

Impulsivity - persistence      EAEPF10      sum of items 10(R),20,30,40(R),50(R)

(R) indicates items that were reverse-scored in the compilation of the factor score.

[1] Item 37 was removed from the scoring of this scale because it duplicated item 17
